May stimulate lactotrophs directly to secrete PRL.

TISSUE SPECIFICITY: MEDULLA OBLONGATA AND HYPOTHALAMUS.
                                                                                                                                                                                                                                                                                                                                      TPDINPAWYAGRGIRPVGRF

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: OCELLAR CELLS; MEDIAN OCELLI.

TISSUE SPECIFICITY: OCELLAR CELLS; MEDIAN OCELLI.

PTM: SOME OR ALL OF THE CARBOXYL-TERMINAL SER OR THR RESIDUES M
BE PHOSPHORYLATED (BY SIMILARITY).

MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 530 NM.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C. Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_40:\*

Database :

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CATALYTIC ACTIVITY: ADP-glucose + (1,4)-alpha-D-glucosyl)(N) =
ADP + (1,4)-alpha-D-glucosyl)(H+1).
PATHWAY: Glycogen biosynthesis; second step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: BELONGS
